Hardware

How to generate a GLUED operating system disk to be used in an autonomous vehicle or gateway?

First you will need to download GLUED source code to your computer (command git clone https://github.com/LSTS/glued.git). If you wish to use **docker** (optional), you can install it using the following commands:

cd path_to_glued
sudo apt-get install docker docker.io
cd docker
sudo make

Once you have GLUED on your computer, follow the instructions available in this [wiki](#) to generate the disk for the intended system. Please note that these instructions are for systems already existent in GLUED.
